

Foodoku ~ picture pieces ~ set B

Cut along all the dotted lines. This gives you 81 picture pieces: 9 times 9 pictures. The puzzles you use them with are on separate sheets, and more will be added on kidsandcaboodles.com every now and then. You can also use a blank playing board and set it up according to any Sudoku puzzle you find: just decide which food will replace which number, and put each set-up picture on the blank board in whichever squares the puzzle shows that number. After set-up, you can ignore the numbers and just go by the pictures, because Sudoku has nothing to do with adding or multiplying numbers. It's purely a pattern and logic puzzle. Instructions on how to play the puzzle are on a separate sheet.

These pictures are from copyright-free clipart.

Foodoku was invented by Marian Buchanan as a variation of the Japanese game Sudoku.
